

**Susan D. Chapnick, M.S.**

I am the President and Principal Scientist of New Environmental Horizons, Inc., a small women-owned business specializing in the planning and evaluation of environmental chemistry data for site assessment, risk assessment, and remediation. I have been an associate member of the LSPA since 1998, during which I have presented at several membership meetings on environmental data quality and interpretation. I am the former co-chair of the Member Services and Program Committee and currently a Director-at-Large of the association.

As a current member of the LSPA Board, I have worked on improving communications to our membership and the public, enhancing the benefits of membership through monthly programs that are both technical and timely, and representing the perspective of an associate member in Board decisions. As a current member of the MassDEP BWSC Advisory Committee, appointed by the Assistant Commissioner, and an integral member of several MassDEP workgroups, I have successfully collaborated with both LSPs and MassDEP to assist in the development of technical guidance and policy. During the past 10 years, my business partner, Nancy C. Rothman, Ph.D., and I have developed and presented several training courses for both the LSPA and MassDEP to promote scientific integrity and data quality in the collection, analysis, and evaluation of environmental data in support of MCP decisions.

I would be honored to continue my role as Director-at-Large on the LSPA Board leveraging my 25+ years in environmental science and my proven positive working relationships with both the LSPA and MassDEP to promote practical solutions through better communications and input to guidance and policy.

## **Cosmo Gallinaro**

I am currently Chief of Operations at Common Sense Environmental, Inc (CSE) and have more than 25 years experience with a wide range of environmental assessment and remediation projects in Massachusetts. My project experience includes work for Federal Agencies, State Agencies and Authorities, Real Estate Developers, commercial clients and homeowners. The projects ranged from some of the larger more complex MCP projects in the state to some of the simplest. I also provide expert services to several insurance companies and provide technical review and oversight of remedial actions on covered losses. The range of work gives me an understanding of the challenges that LSPs face throughout the conduct of the work and the interaction with regulatory bodies.

I have been a member of the LSPA since the organization was formed and have actively served on committees including regulations and member services where I currently remain active. During my time as an LSPA member, serving on the member services committee and manning the LSPA booth at the soils conference, I have talked with a number of LSPs and environmental professional about the challenges faced in our work, the role the LSPA plays, and the benefits of belonging to a professional society. I have actively encouraged both membership and participation in the organization. With your vote, I would like to play an active role on the LSPA Board of Directors to assist in setting direction for the organization and to work on the development of programs and initiatives that meet the needs and benefit the membership. I would like to take this opportunity to thank the LSPA Board for this nomination and to ask for your support.

**Kevin Beaulieu**

I am President of Wave 2 Environmental, Inc., and have been an environmental consultant for nearly 20 years. I have been an LSPA member for 11 years, an active participant of the Technical Practices Committee for the last 8 years and am currently serving my second consecutive term as the Committee Chair. I have been a practicing independent LSP for the last 5 years, specializing in due diligence site investigations and various MCP related response actions. I have direct experience with providing MCP compliance assistance, Mass Development projects, 21J funded clean-ups and home-owner (insured and uninsured) heating oil releases. As a member of the Technical Practices Committee, I have been able to remain current on regulatory/policy development and over the years have grown to appreciate the value of being a participating LSPA member. My term as Committee Chair has also prepared me for the level of commitment it takes to be an elected representative for a volunteer organization with so many useful functions and services to its members.

I would like to thank the LSPA Nominating Committee for this nomination and for providing the opportunity to work with the leadership of this Association. It is an honor to be considered for such a position and to continue the work of so many past Board members for whom I have great admiration and respect. As a member of the LSPA Board of Directors, I will work hard to continue expanding the Association's efforts to keep LSPs informed, share our experiences for mutual benefit, promote practical solutions through better communications and provide meaningful input to on-going and future policy and government initiatives. I look forward to this challenge and appreciate your consideration.
